

Visual Cues for EnviroAlert™ Product Differentiation

Q: How do I tell the difference between the old outdated EA units and the new updated EA units?

A: Please note the following text and images of the most distinguishing characteristics.

On the Product

On the inside flip cover that protects the programming buttons you will notice a small blue dot.

No blue dot = old, outdated unit

Blue = new, updated unit

When powering up an EA unit the LCD screen shows the Model number (EA200 or EA400) and the software revision level. The software revision levels are as follows.

b1 = old, outdated product

c1 = new, updated product

OLD

NEW

On the exterior of the original box you will notice a UPC barcode on the left hand side. It will read as follows for each model:

82075 00079 = Old, outdated EA200 UPC (12 volt – *only voltage available*)

82075 00080 = Old, outdated EA400 UPC (12 volt – *only voltage available*)

82075 20012 = New, updated EA200 UPC (12 volt version)

82075 20024 = New, updated EA200 UPC (24 volt version)

82075 40012 = New, updated EA400 UPC (12 volt version)

82075 40024 = New, updated EA400 UPC (24 volt version)
